SDK Introduction

The **unitree_sdk2** is an SDK developed by Unitree Technology for their new generation of robots. The SDK encapsulates interfaces f or low-level motor control, high-level motion control, LiDAR point cloud data, audio and video transmission, SLAM (Simultaneous Loc alization and Mapping), odometry, and other functionalities. It also provides relevant function interfaces.

You can learn robot control and complete secondary development tasks for the Go2 robot by following the provided interfaces and e xamples in the 《Go2 SDK Development Guide》 that we offer.

SDK Support Status

Currently, the **unitree_sdk2** supports the Unitree Go2 EDU version (include X) of robots. Other models or versions of robots are not supported for secondary development using this SDK.

> The SDK supports both Unitree B2 and Unitree H1 robots simultaneously.
