Software Interface Services

Last Updated On：2023-12-26 18:14:35

As shown in the above figure, in addition to the implementation of Gstreamer's udp interface in the image transmission section (see the multimedia service interface document), Go2's software interface service supports two modes: subscription/publication and req uest/response.

- Subscription/Publishing: The receiver subscribes to a certain message, and the sender sends messages to the receiver based on t he subscription list, mainly used for medium to high frequency or continuous data interaction.
- Request/Response: A question and answer mode that enables data acquisition or operation through requests. Used for data exch ange during low frequency or function switching.

The officially provided unitree_sdk2 optimized and encapsulated the corresponding part of the request, achieving functional invocat ion.
